31	There is a button to go back to the homepage inside the article	No
32	The images selected in the homepage have good contrast	Yes
33	The position of the images are correct	Yes

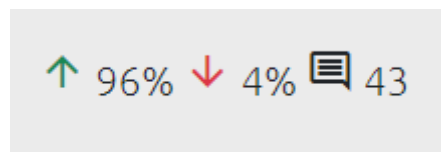

2. Changes to achieve good web usability

Help (in top right): In the webpage there isn't a "help area" for the new users, this needs to be implemented in the header alongside the "login" button to help new users.

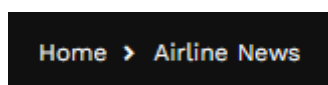

Use of colors and icons in some areas: In some buttons and links there aren't icons to represent that action (The search bar, login button, etc.). For example:

In the dropdown button for filter articles, alongside the text, in the left, the use of icons would improve the usability of the webpage, making it readable much more quickly. In other areas this is used like in the opinion area of the article:

Breadcrumbs: I didn't use the breadcrumbs in the representation of the webpage (because it is not necessary). But in the design of the webpage, in the article section, it is not in use. This will be implemented in the article page in the future. (This also applies inside the article, there is not a button to go back to the homepage in the design document).

Example of a breadcrumb
